Introduction

The robot reads first

Before any human sees your resume, software does. Applicant Tracking Systems (ATS) parse, rank, and filter resumes — and **up to 75% of applications are rejected before a human ever looks**. This is not about tricking the system. It is about making your real qualifications machine-readable AND human-compelling.

What this book gives you: a 50-point master checklist, section-by-section build guides, 200 action verbs, 10 before/after transformations, keyword strategies, and formatting rules that work with every major ATS (Workday, Taleo, Greenhouse, Lever, iCIMS).

WHY IT WORKS: *The goal is dual: pass the parser AND wow the recruiter who reads it in 6 seconds. Most advice optimizes for one and fails the other. This book does both.*
